

Course Code : IA 02
Course Name : Advanced Composite Plan I on Industrial Automation
Course Duration : 80 Hrs (20 modules, each module is of 4 Hrs)
Maximum Duration : 1 Month

Overview of the Course:

IIATCA is conducting 80 Hrs individually cared hands on training on Advanced Plan I course on Industrial Automation for fresh budding Electrical, Instrumentation and Electronics engineers, start-ups, entrepreneurs and managers of project developers, process industries, factory level operations, system integrators and EPC companies. Course focus is on Industrial Automation projects design and development.

The participants will gain knowledge and will have the opportunity to interact with highly experienced automation project managers and experts on site & resource assessment.

Who should attend:

Electrical/Instrumentation and Electronics engineers who are looking for jobs, and practicing engineers or project managers from industry who need skill upgradation.

Learning Outcome:

PLC programming in *either of the any one* from *Rockwell, Siemens and Mitsubishi/Schneider* make hardware and software

- Introduction on Industrial Automation and various components of Automation PLC Hardware fundamentals,
- Ladder Logic Concepts
- Introduction to real world control components used in industrial process
- Identification and conventional electrical wiring through various applications
- Use of PLC programming software through various applications
- Real world control components like contactors, relays, timers, solenoid valves etc used in industrial process
- Identification and conventional electrical wiring through various applications
- Use of PLC programming software through various applications
- Concept of analog applications

SCADA/HMI programming in *either of the any one* from Rockwell, Siemens or Mitsubishi

- Introduction to SCADA/ HMI software
- Creating projects on SCADA/ HMI Graphic displays, Screen generation
- Tags and Run mode of application with PLC communication Data logs, Alarms, Trending and Report generation

AC Drives program in *either of the any one* from Rockwell, Schneider or Mitsubishi

- Introduction to AC Drives for AC motor speed control
- Speed torque characteristics of AC motors and also characteristics of mechanical loads/driven equipments
- General philosophy and various types of AC Drives
- Speed control, acceleration and braking of AC Drives
- Selection and application of AC Drives
- Configuration of V/F and vector controlled AC Drives

Training Methodology: The course will be conducted as individually cared program with hands on practical training supported by lectures as and when necessary sometimes using Power Point Presentations. Candidates shall have to program the hardware and software and wiring of the components also have to be done by them.

Training Materials:

All the candidates shall be given a CD consisting of

- 1.Training Documents
- 2.Freely distributable PLC programming software

Certification:

On completion of training, all candidates shall be evaluated by the authorities of International Institute for Advanced Training on Control and Automation and successful candidates shall only be issued certificates by them.

Institute operating Time: 10:00 am - 08:00 pm (Monday to Saturday)
10:00 am – 04:00 pm (Sunday)

Course Fees & Enrollment: Please Contact us through
